

5 advanced practice questions that stay strictly within what Bubble's **AI App Generator** is documented to support (clear prompts that specify **app type & purpose, target users, core features, and visual style**; avoiding vague or malicious wording and overly prescriptive layouts). ¹

Each question also asks students to check that the generator returned an initial **web- app scaffold with pages, database, and basic workflows** before they continue in the visual editor. ²

1) Newspaper “Assign → Write → Edit → Publish” MVP (Web)

Challenge: Write a generator prompt for a **web app** that helps a small newsroom track articles from assignment to publication (no third- party integrations). Your prompt must clearly state:

- **App type & purpose:** a newsroom workflow tool to capture pitches, draft copy, and mark articles ready for publication. ³
- **Target users:** reporters and editors at a local newspaper. ⁴
- **Core features:** create “Story” entries with status (Pitch/Draft/Editing/Ready), assign to a user, editor notes, and a simple “Published Articles” page. ⁵
- **Visual style:** clean, newsprint- inspired, high contrast for readability. ⁶
- **What to avoid:** don't specify pixel- level layouts; keep instructions specific (not vague) and compliant. ⁷

Post- gen review: Confirm the generator produced **pages, a database (e.g., Story, Note, User fields), and basic workflows** you can refine in the editor. ⁸

2) Social Media Content Calendar & Copy Helper (No APIs)

Challenge: Draft a generator prompt for a **web app** that lets a social/PR team plan posts and store copy variations—**without** connecting to external social networks.

- **App type & purpose:** campaign planning and content drafting hub. ⁹
 - **Target users:** in- house comms/PR coordinators. ¹⁰
 - **Core features:** data types for Campaign, Post (date/time, platform label, draft copy, status), and a calendar/list view; a page for “Approved posts.” ¹¹
 - **Visual style:** modern workspace aesthetic with clear hierarchy. ¹²
 - **What to avoid:** vague prompts (“make a cool social app”); injection/malicious content; layout micromanagement. ¹³
- Post- gen review:** Verify the scaffolded **database and workflows** (e.g., create/edit Post; set status). ¹⁴
-

3) Media Content Analysis Notebook (Paste- in Text Only)

Challenge: Compose a generator prompt for a **web app** that lets analysts paste article text, tag claims, and capture framing notes—**upload/paste only; no external scraping**.

- **App type & purpose:** internal media- analysis notebook to annotate claims and bias cues. ¹⁵
- **Target users:** information professionals and media researchers. ¹⁶
- **Core features:** data types for Document (title, outlet, pasted text), Claim (quote, category), and Notes (framing/sentiment tags); a “Brief” page that compiles highlights. ¹⁷

¹⁷<https://manual.bubble.io/help-guides/ai/bubbles-ai-app-generator>

- **Visual style:** research- tool look with readable typography. ¹⁸
 - **What to avoid:** do not request crawling/APIs; keep the instructions precise and acceptable- use compliant. ¹⁹
- Post- gen review:** Ensure the AI created **pages, database types, and simple create/edit workflows** for Document and Claim. ²⁰
-

4) Image- Building Portfolio / Press Kit Microsite (Single Tenant)

Challenge: Author a generator prompt for a **web app** that produces a simple portfolio/press- kit site for one public figure or organization.

- **App type & purpose:** showcase profile, bio, news mentions, downloadable press text (no private file controls or multi- tenant logic at generation time). ²¹
 - **Target users:** PR managers and the public. ²²
 - **Core features:** pages for Home (hero + featured assets), Bio, Press Mentions (title/link/summary), and Contact (non- email- sending placeholder); simple “Theme” fields (colors/type). ²³
 - **Visual style:** professional, media- ready branding direction. ²⁴
 - **What to avoid:** over- specifying exact element positions; any request that violates acceptable- use. ²⁵
- Post- gen review:** Check that the generator scaffolded **pages, basic data types (Profile, Mention), and workflows** to create/edit items. ²⁶
-

5) PR Issue Brief Builder (Internal Use)

Challenge: Create a generator prompt for a **web app** that helps PR teams draft internal issue briefs (facts, stakeholder notes, FAQs) and save versions.

- **App type & purpose:** structured drafting of internal briefs (no external publishing). ²⁷
 - **Target users:** corporate communications/PR staff. ²⁸
 - **Core features:** data types for Brief, Section (Facts/Unknowns/Stakeholders/FAQs), and Version; list and detail pages for editing. ²⁹
 - **Visual style:** calm, document- centric workspace. ³⁰
 - **What to avoid:** vague objectives, malicious/injection- style prompts, or prescriptive screen blueprints. ³¹
- Post- gen review:** Confirm the AI returned a **database and simple workflows** you can refine (add/remove sections, set brief status). ³²
-

Quick reference for students (tie- back to Bubble docs)

- Include **app type & purpose, target users, core features, and visual style** in the generator prompt; that's how Bubble AI knows what to scaffold. ³³
- Avoid **vague or malicious prompts** and don't over- specify **pixel- perfect layouts**— the generator may reject or underperform if you do. ³⁴
- After generation, you'll have an initial **web- app structure with pages, database, and workflows** to refine in the editor. ³⁵
